Education

Vignan's Institute of Information Technology
Bachelor of Technology in Computer Science

2023 – Expected 2027
CGPA: 8.7

Professional Experience

SDE Intern

Mar 2026 – Present

Ayursh

- Designed efficient workflows for therapy booking and automated refunds, improving overall system operations and user experience.
- Migrated the legacy Doctor application from Kotlin to **Flutter**, building a reliable and unified cross-platform mobile experience.
- Optimized UI components and application architecture to maintain high performance and stability across all environments.

Backend Developer Intern

Jul 2025 – Aug 2025

ZORO Innovations

- Built the Campus Core platform, integrating the **React.js** frontend with the **Node.js** backend to synchronize data for **500+ daily users**.
- Developed robust RESTful API endpoints and refined MongoDB schemas, optimizing data retrieval and reducing query execution time by **20%**.
- Managed version control and branch strategies using Git to support collaborative development workflows and system deployments.

Projects

Agent D-I-D

[Source Code](#)

- Developed an event-driven AI learning architecture featuring dual personas (Jarvis and Ultron) to simulate interactive learning.
- Integrated **mem0** to provide persistent memory across user sessions, allowing the agents to retain context.
- Integrated **Rough.js** to render dynamic, sketch-style visual feedback corresponding to agent interactions.
- Tech Stack:** Python, FastAPI, LangGraph, mem0, Rough.js

DesignCritic AI

[Source Code](#)

- Built an autonomous UI validation system using **Python** and **LangGraph** to critique designs against strict WCAG standards.
- Implemented a **RAG** pipeline to cross-reference **LLM** outputs with official documentation to prevent AI hallucinations.
- Designed an interactive **Streamlit** interface for users to upload UI components and view generated feedback.
- Tech Stack:** Python, Streamlit, LangGraph, LLMs, RAG

EcoTrack

[Source Code](#)

- Built a full-stack waste management ecosystem using **React Native** and **Node.js** to connect users with verified recycling centers.
- Engineered **Express.js** REST endpoints to manage user profiles and securely process recycling pickup schedules.
- Implemented live fleet tracking for 50+ vehicles using **Socket.io**, achieving real-time location updates.
- Tech Stack:** React Native, Node.js, Express, MongoDB, Socket.io

Technical Skills

- Languages:** Python, Java, JavaScript, SQL
- Backend & AI:** Node.js, FastAPI, LangGraph, mem0, LangChain, RAG
- Tools & Cloud:** Git, Docker, GitHub Actions, Socket.io, MongoDB, REST APIs
- Core Competencies:** Data Structures & Algorithms, Object-Oriented Design, API Integration, Multi-Agent Systems

Achievements

- LeetCode Knight:** 1850 peak rating, ranked among the top 5% globally.
- CodeChef 3-Star:** 1700 peak rating in competitive programming contests.
- CP Lead, AlgoZenith College Club:** Led programming initiatives and peer learning sessions.
